cmccallop@dutchesscap.org

845-452-5104 ext. 130

Light Refreshments Will Be Served

What is Weatherization?

“Weatherizing” a home involves installing a wide variety of energy efficiency measures. This includes insulation around doors, windows and in attics; installing smart appliances and new heating, ventilations and air conditioning systems; and revamping electrical systems. The most effective weatherization utilizes a ‘whole home approach’ which combines several of these procedures to reduce net energy use.
